

Table of Contents: *Economics with Calculus*

Michael C. Lovell

©World Scientific Publishing Co., 2004

Chapter 1: Introduction

1.1	Economics defined	1
1.2	The scope of economics	2
1.3	Allocating resources	3
1.4	Adam Smith and the invisible hand of free enterprise	3
1.5	Economic performance: an overview	4
1.6	Prospectus	9

Chapter 2: Production possibilities

2.1	Overview	1
2.2	The production transformation curve	1
2.3	Opportunity cost and the MRT	3
2.4	Linear programming	7
2.5	The gains from trade	10
2.6	Methodological note	15
	Appendix 2.1: Alternative proof of a fundamental proposition	16

Chapter 3: Supply and demand: where do prices come from?

3.1	Overview	1
3.2	The Middletown housing market, a parable	2
3.3	The Econoland corn market	5
3.4	Demand and supply curve shifters	10
3.5	Elasticity	13
3.6	Some Applications	18
3.7	Foreign exchange rates	21
3.8	Taxes	26
3.9	Markets versus the ballot box	33

Chapter 4: Maximizing satisfaction

4.1	Introduction	1
4.2	One good and two consumers	2
4.3	Two goods and one consumer	8
4.4	Indifference curve applications	17
4.5	The box diagram – two goods and two consumers	23
4.6	Summary and conclusions	27
	Appendix 4.1: Lagrangian Multipliers	29

Chapter 5: The business enterprise

5.1	Introduction	1
5.2	Organization of the firm	2
5.3	Profits and accounting	7
5.4	The technological constraint	13
5.5	Maximizing profit	18
5.6	Management science illustrated: OLS & JIT	25

Chapter 6: Market Structure

6.1	Overview	1
6.2	Competitive markets	2
6.3	Monopoly Versus Competition	12

6.4	Monopolistic Competition	21
6.5	Oligopoly	26
6.6	Antitrust action	34
Chapter 7: Distribution: who gets what?		
7.1	Overview:	1
7.2	Measuring inequality	1
7.3	Rewards: wages, productivity, exploitation and monopsony	6
7.4	Government and the distribution of income	13
Chapter 8: Monitoring economic performance		
8.1	Overview – macro versus micro	1
8.2	An economic report card	2
8.3	Unemployment	3
8.4	Inflation arithmetic	10
8.5	How to live with inflation	19
8.6	Business cycles	27
	Appendix 8.1: Compound interest	32
Chapter 9: GNP accounting and the multiplier		
9.1	Overview	1
9.2	GDP, disposable income and consumption spending	2
9.3	The simple multiplier: depression economics	10
9.4	A simple model of the business cycle	16
9.5	Critique and qualifications – shrinking multipliers	18
Chapter 10: Money prices and output		
10.1	Overview	1
10.2	Explaining investment and the IS curve	1
10.3	The Money Supply	5
10.4	Money and interest rates	12
10.5	Aggregate demand - aggregate supply	19
10.6	Monetarists versus Keynesians	24
Chapter 11: Dynamics, Expectations and Inflation		
11.1	Introduction	1
11.2	Market dynamics	1
11.3	Inflation, unemployment and the Phillips curve	11
11.4	Rational expectations	21
11.5	What should central bankers do?	24
	Appendix 11.1: Solving first order linear difference equations	29
Chapter 12: Growth and development		
12.1	Introduction	1
12.2	Malthusian population dynamics	2
12.3	A classical growth model, simplified	2
12.4	Growth accounting – the sources of economic growth	4
12.5	A neo-classical model of the growth process	7
12.6	Population trends	12
12.7	Exhaustible resources	14
12.8	Renewable resources – over-fishing	17
12.9	Conclusions	20
	Summary	20
